

Automation Scan — Sample Report

Illustration. This is a fictional company built with the same structure, scoring method and depth as a real deliverable. Numbers are illustrative, not from a real client. Your report is written from your actual scan.

1. Executive summary

Achterhuis & Zonen — 4-person plumbing and heating service business, Rotterdam.

Three leaks dominate: manual quoting, one mixed inbox, and no lead capture on the site. Together they cost roughly **9 hours per week** of owner and office time — about **€37K per year** at a conservative €80/h. The top fix (quoted, gated inbox + quote flow) pays back in weeks. Recommendation: **build the Quote & Order Engine first.**

2. How the scan ran

- 90-minute session, owner + office manager, pre-work review of the site and quote history.
- Reviewed: inbox, quoting path, site lead flow, reporting.
- All numbers below are what was *measured* during the session, not estimates from a template.

3. Scored maturity

Five dimensions, 1–5 (5 = controlled system, 1 = manual/scattered).

Dimension	Score	What we saw
Tools & integrations	2	Email + Excel + a paper quote book
Processes	2	Quote steps exist but vary every time
Data	2	Same customer data typed in 3 places
Automation	1	One mail merge rule, nothing else
People & decision	3	Owner is the bottleneck on every quote

The imbalance is the story: **people carry the load, systems carry nothing.**

4. Opportunity matrix

Each candidate scored on impact (hours/value), effort (weeks), and risk.

#	Process	Hours/week	Impact	Effort	Risk	Score
1	Quote to order flow	4 h	High	2–3 wk	Low	Do first
2	Inbox triage + draft	3 h	High	2 wk	Low	Do first
3	Site lead capture	~2 leads/mo	Medium	1 wk	Low	Quick win
4	Monthly reporting pack	1.5 h	Medium	1 wk	Med	Later
5	Purchase-order matching	0.5 h	Low	2 wk	Med	Do not

5. Quantified payback

Math shown per item, not asserted. Owner time valued at €80/h (conservative for the trade).

Leak	Hours/week	× 47 wk	× €80	Yearly
Manual quotes	4 h	188 h	€80	€15,040
Inbox triage by hand	3 h	141 h	€80	€11,280
Site leads missed	~2/mo	—	—	~€5–10K lost revenue
Reporting by hand	1.5 h	70 h	€80	€5,640

Combined: ~9 h/week ≈ €37K/year. The scan fee is credited toward the build that removes the first leak.

6. Roadmap (30/60/90)

Phase	What	Owner involvement
0–30 days	Quote & Order Engine — one guided quote path, price before pay	Approve the price list once
30–60 days	Inbox triage — lanes + drafts, you approve each send	Approve sends
60–90 days	Site lead capture + lead handoff into the quote flow	Review captured leads weekly

Nothing ships without your click. Every action is logged, every release rollback-able.

7. Go / no-go

Go, scoped. Quote & Order Engine first. Expected owner-hours saved after month one: **~4 h/week** — the number is measured after go-live, not promised upfront.

What we would NOT automate: purchase-order matching (low volume, not worth the gate), and we would say so even if you wanted it.

8. What you keep

This report, the diagrams, and the numbers are yours regardless of whether we build. If the answer had been "do not automate", that would be in section 7 instead — and still a successful scan.
